

Game Maker Studio 2.3

Database MySQL

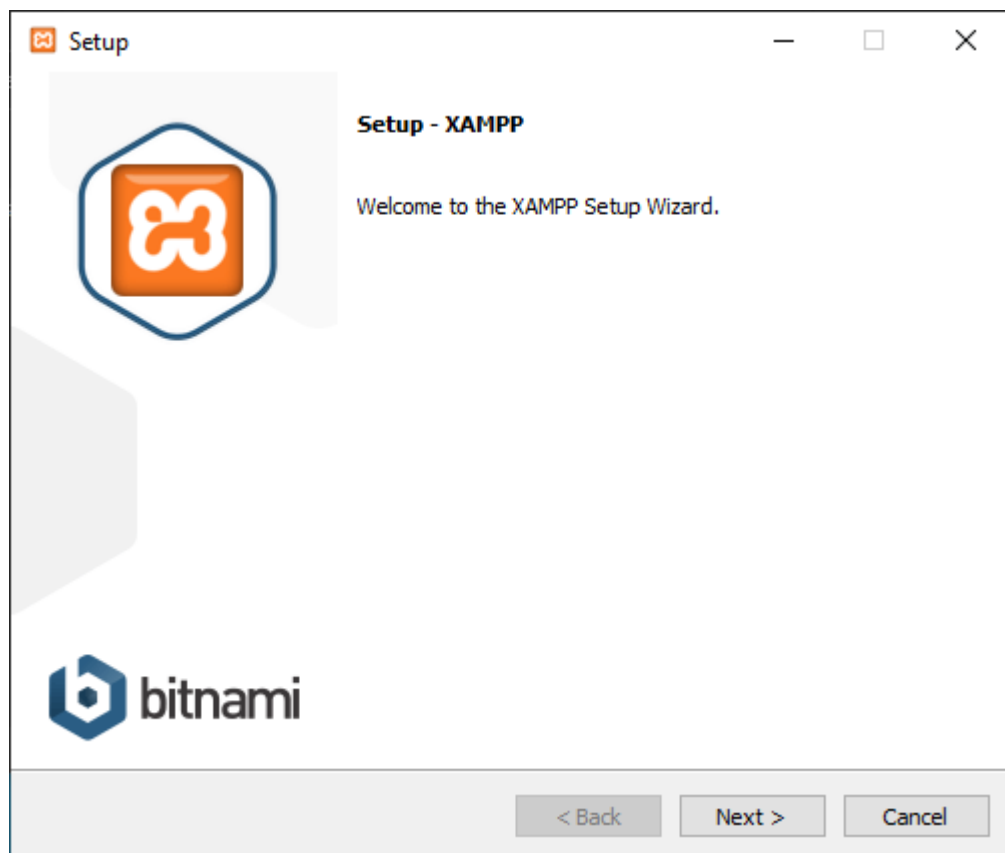

1. LOCAL SERVER

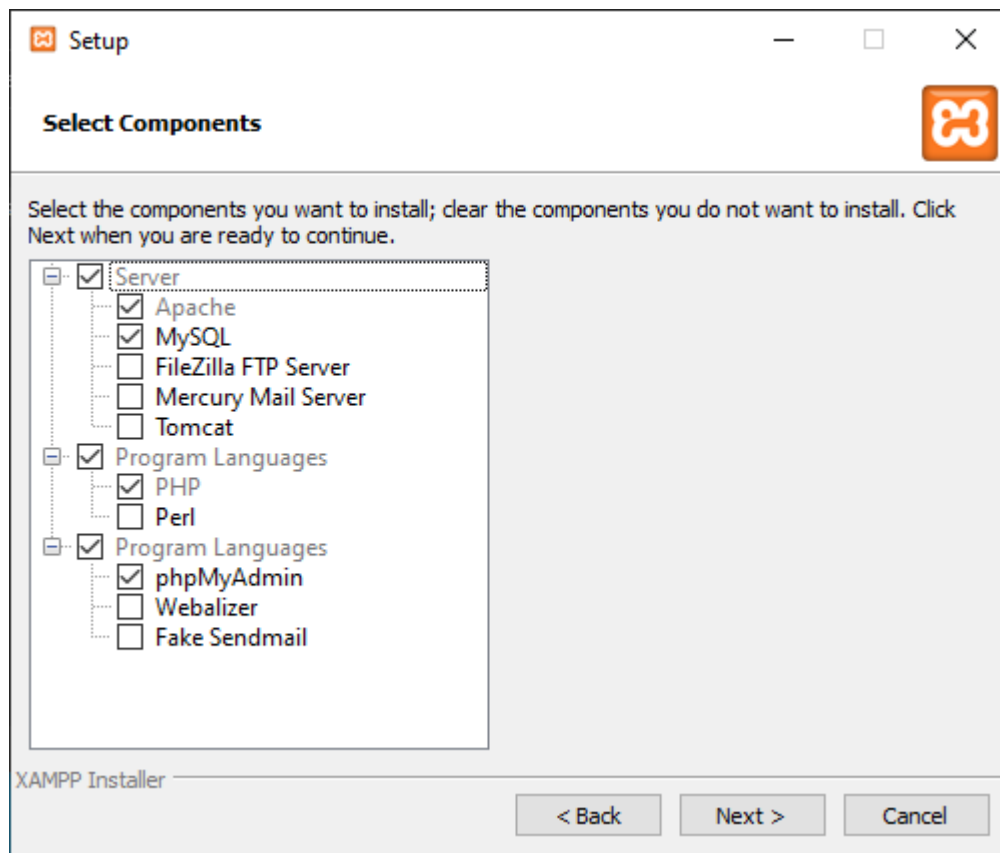

1.1 Download XAMPP

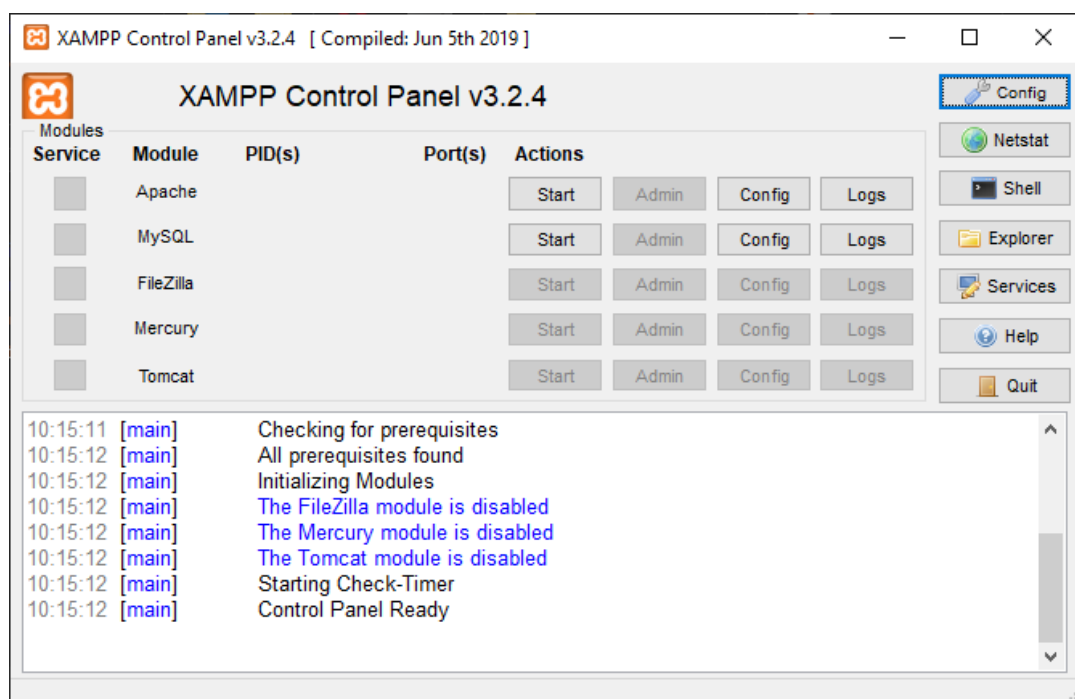

1.2 Install it

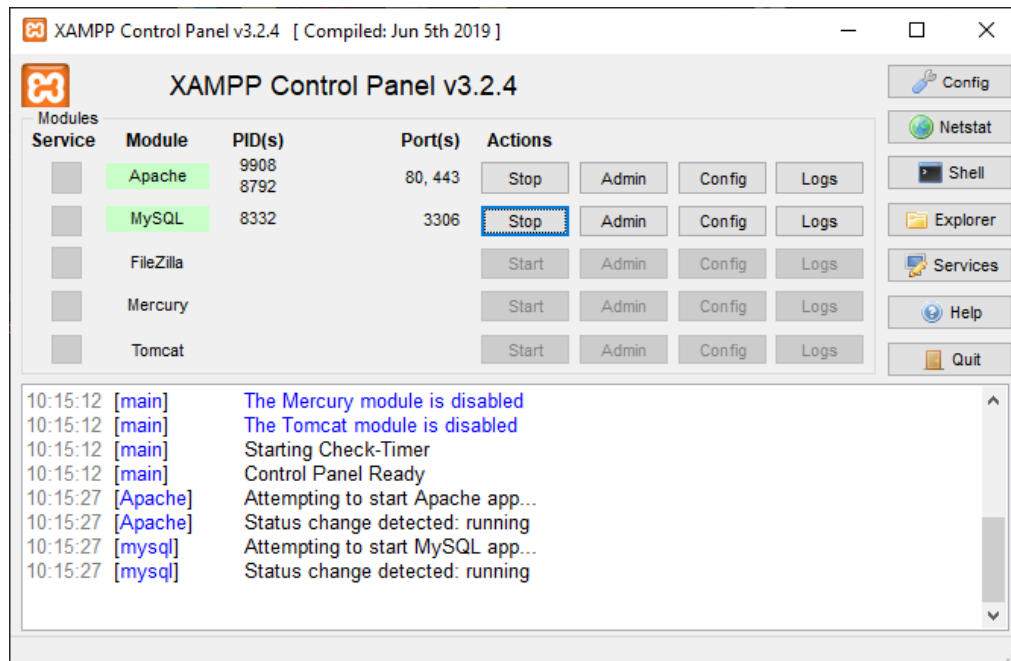

1.3 Select resource you need in your server (you need to select at least that's shown in the picture below)

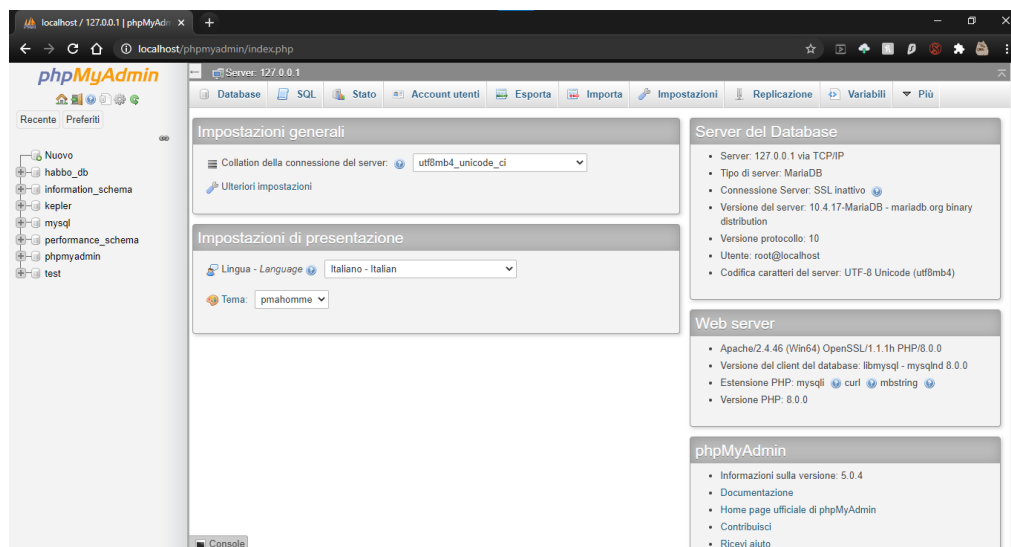

1.4 Run XAMPP Control Panel

1.5 Then start the server (Apache) and the database (MySQL)

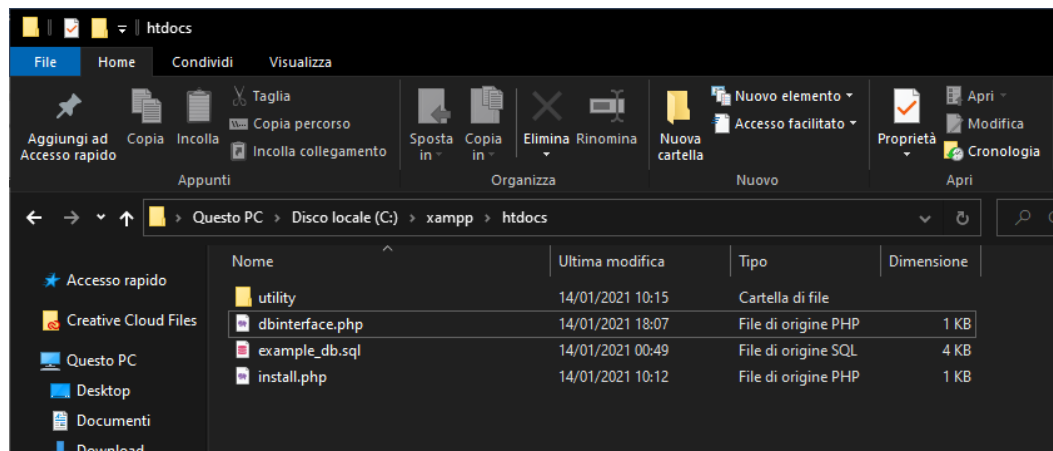

1.6 If you want to watch into your database click “Admin” to show phpMyAdmin

2. Install the example database

2.1 Copy the content of “php.zip” in “C:\xampp\htdocs”

2.2 Go to <http://localhost/> or <http://127.0.0.1/> then open “install.php”

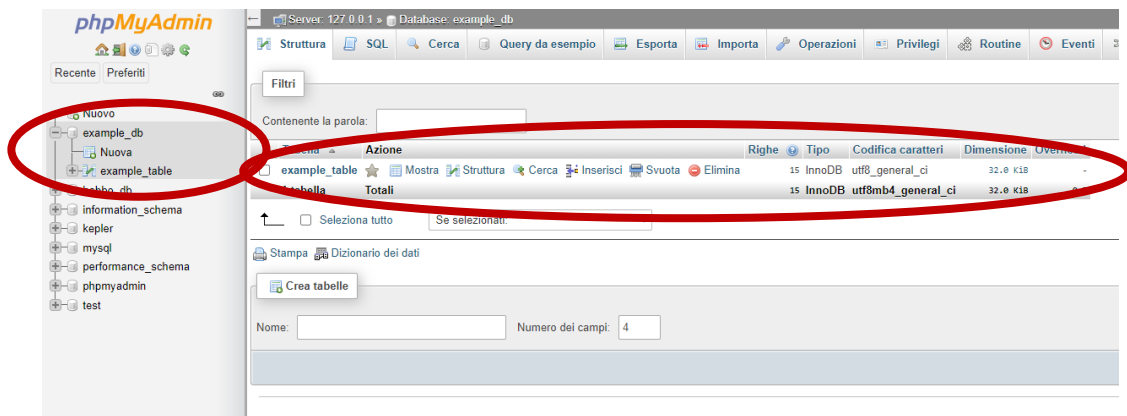

2.3 Now you have installed the example database

Connected successfully

Connected at 14-01-2021 18:31:47

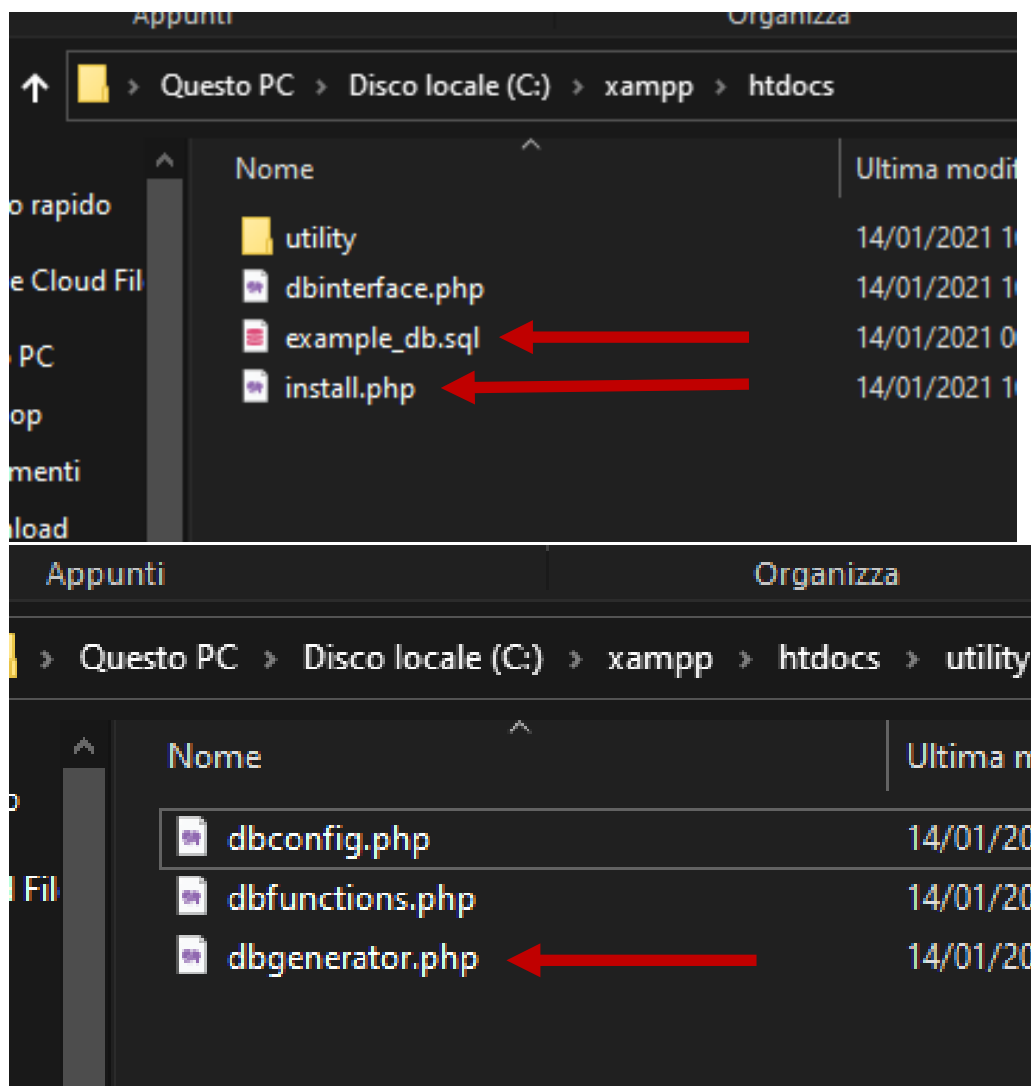

Database created successfully

As you can see in phpMyAdmin

NOTE: if you have some errors, check “C:\xampp\htdocs\utility\dbconfig.php” and edit auth credentials to your database

2.4 Now you can delete unnecessary files

3. Import the project and try it yourself 😊 if you have some question or issues please contact me
